

IN-CAR HYDRATION SYSTEM

ABSTRACT

[0040] Systems and methods for a liquid delivery system for a race vehicle to provide the driver of the race vehicle with readily available cool fluids are disclosed. One embodiment is directed to an insulated bag mounted in the race vehicle having a collapsible fluid bladder and a cooling medium within the bag. Tubing connects the bladder to a valve for the driver to drink from. Preferably, a pump is coupled to the tubing to move fluid through the system.
